

QED CRT CABINETS

Offering specialised storage designed to maintain ambient room temperatures, the QED CRT Cabinets ensure safe storage of medications for use in clinical and pharmaceutical settings.

For medicines required to be kept under 25°C, ensuring room conditions are kept at an ambient temperature is essential for maintaining their efficacy. If temperatures get too low or high, the potency and shelf-life of these medicines can reduce significantly.

As well as storing such medicines, the QED CRT Cabinet keeps them at an optimal temperature. Not only does this ensure their efficacy, but it maintains their shelf-life - saving them from going to waste.

ECONOMICAL TO RUN

Compared to air-conditioning alternatives - which are increasingly expensive to install, run and maintain - the QED CRT Cabinet is much more efficient and cost-effective. It also uses eco-friendly refrigerants.

TEMPERATURE CONTROL

The QED CRT Cabinet is equipped with a quiet internal fan and operates within a 15–25°C range, maintaining a stable 20°C even on hot days. It monitors ambient temperature and will automatically activate when conditions go outside of this range.

CD CABINET COMPATIBLE

Larger models of the QED CRT Cabinets can be fitted with internal controlled drug units. These can be fixed through the outer cabinet to a suitable wall, making them fully compliant with all current legislation for the storage of controlled drugs.

IDEAL FOR PHARMACY ENVIRONMENTS

The QED CRT Cabinet is ideal for use in clinical trials, where maintaining an optimum temperature for the medicines being tested is essential for reliable results.

Clinics, wards and surgeries can all benefit from controlled room temperature cabinets for storing medication - especially when there is no existing air-conditioning.

Precise temperature monitoring enables pharmacists to trust the digital display as a reliable, guaranteed indicator of the correct temperature when making their required checks.
